

# Open access transition at the Max Planck Society

More than 80% of Max Planck Society researchers' papers are published in the journals of just 20 publishers.

Signal of the growing relevance of open access publishing to our authors, five of the top 20 are open access publishers.

By negotiating transformative agreements with subscription publishers, we have the greatest impact in delivering our authors open access publishing opportunities as well as reining in "APCs in the wild". OA publishing agreements help level the playing field in the market and support our authors where they choose to publish.

As of 2023, the MPDL has 23 active transformative agreements and 10 direct billing arrangements with OA publishers in place, enabling MPG authors to publish their articles openly in nearly 10,000 journals, without having to pay APCs, and in full compliance with Plan S.
